

# Dividing decimals using mental methods and the formal written method

- Use mental methods to divide a decimal by a 1-digit number
- Use the formal written method of short division to divide a decimal by a 1-digit number

1 For each machine, work out the output number for each input number.

a 0.6

0.15

4.07

5.4

0.09

b 0.04

6.3

1.08

0.17

4.92

c 9

3.8

7.7

62.4

0.2

d 59

8

72

4

12

2 Malik answered each of these calculations incorrectly. Copy each calculation and write the correct answer.

a  $0.3 \times 10 = 30$  ✗

b  $5.08 \times 10 = 58$  ✗

c  $34.8 \times 100 = 348$  ✗

d  $18 \div 100 = 1.8$  ✗

e  $43.7 \div 10 = 0.437$  ✗

f  $0.08 \times 10 = 8$  ✗

g  $4.1 \div 10 = 41$  ✗

h  $8.05 \times 100 = 85$  ✗

i  $6 \div 100 = 0.6$  ✗

j  $13 \div 10 = 0.13$  ✗

k  $34 \div 100 = 0.034$  ✗

l  $0.01 \times 100 = 0.1$  ✗

Challenge 2

1 Sort the calculations into two groups: those you can work out using mental methods and those where you need to use a written method.

Example

$27.6 \div 6 \rightarrow 30 \div 6 = 5$

$$\begin{array}{r} \text{T O . t h} \\ 4 \cdot 6 \\ 6 \overline{) 27.36} \end{array}$$

2 Work out the answer to each calculation in Question 1. For the calculations that need a written method, use the formal written method of short division. Remember to estimate the answer first.

Challenge 3

Play this game with a partner. Take turns to:

- Choose a number from below and write it down (you can only choose each number once).
- Roll the dice.
- Divide your chosen number by the number on the dice. Choose the most appropriate method to calculate the answer: mental or written.
- Write the calculation and the answer to 2 decimal places. Show any working out.

The person with the smallest answer scores one point. The first person to score five points is the winner.

You will need:

- 0-9 or 1-10 dice
